## The following characters have specialized meaning:

Special Characters	Description
, ( ) [	These characters end a text token.
= > < !	These characters end a text token because they signify the start of a field operator. (! is special: != ends a token.)
` @ \Q < { [ !	These characters signify the start of a delimited token. These are terminated by the end character associated with the start character.

**1** Using interface inheritance to address problems in system software evolution 100%

evolution

Graham Hamilton , Sanjay Radia

**ACM SIGPLAN Notices , Proceedings of the workshop on Interface definition languages** August 1994

Volume 29 Issue 8

Two specific problems faced in large distributed systems are (1) evolving and managing different versions of an interface while minimizing the impact on existing clients, and (2) supporting the addition of auxiliary interfaces that are orthogonal to the main interface of an abstraction. In the context of the Spring distributed system, we addressed both problems using an object-oriented interface definition language. Different versions of an interface are represented as different types with an inh ...

**2** An extensible programming environment for Modula-3 100%

Mick Jordan

**ACM SIGSOFT Software Engineering Notes , Proceedings of the fourth ACM SIGSOFT symposium on Software development environments** October 1990

Volume 15 Issue 6

This paper describes the design and implementation of a practical programming environment for the Modula-3 programming language. The environment is organised around an extensible intermediate representation of programs and makes extensive use of reusable components. The environment is implemented in Modula-3 and exploits some of the novel features of the language.

**3** The FINITE STRING newsletter: Abstracts of current literature 100%

Computational Linguistics Staff
